The lecturer commenced by saying that with a scientific lecture, we must begin with the assumption that the audience know nothing about the subject while with a discourse on morals, or general intelligence, we assume that the public are already well posted. He then took up the composition of carbonic acid and the part | BLEACHED AND BLOWN SHEETINGS It performs in the air we breathe, the water we drink, the clothes we wear and the world we in habit. Commencing with the lowest form in which animal life exists, he passed through the various stages of pulpes, molusca, crustacia, fish, reptiles, birds, and beasts up to man, the crowning work of creation, showing the manner in which carbonic

acid supported the lives of each. The geological seructure of the earth was then taken up, and the formation of the different strata, from the silurian rocks, through the coal beds and sandstones to the surface, was explained, with the

fossils which are formed in each. The lecture was very instructive and interesting, not only to the scientific student, but to all who were desirous of knowing more of the minute of every day life. Cleveland has never listened to a finer lecture than Prof. Youman's.

1. The Hallet, Duris & Co. Pianos have a greater tength of string than those of any other make in the same street case.

The truth of this statement may be seen at a plance, as nearly the unite length of a stealght string can be used for vibration, (see diagram) while those that are bent, necessarily have the rest or bridge pin inserted at a great distance from the end of the plane; vise it earlier united to a great distance from the end stage in twalls before it could be degreen up within an octave of concest allets. encert pitch.

It well known that the reason a six-actave plane does not because they sillower and doubt of time of a seven-octave plane is that its afrings are abortor. With the above improvement, a booting faller, flarts & Co. plane is enabled to send out a ballow and richer cone that a seven octave plane of any other.
